2021

Customer profile

The Austrian Federal Ministry of the Interior (BMI) is the largest and most sensitive service provider in the security sector. The 2021 budget volume amounted to EUR 3.49 billion.

Initial situation

The 2022 organizational reform changes the business division for numerous employees. The BMI wanted software support in planning the far-reaching restructuring.

Solution

The HR planning software LeanHR is based on the BI platform LeanMIS and enables planning via drag & drop on HR data from SAP. In a highly secure IT environment, LeanHR combines the security of a central database with the intuitive usability of Microsoft Excel.

Results

Tailor-made, modern HR planning for one of Austria's largest organizations. The software fits seamlessly into the security-oriented IT landscape, and is ready for further development.

Software and services

Microsoft Excel
Microsoft SQL Server
Microsoft Windows
VPN

HR Planning on SAP Data

*"LeanMIS supports us in the digitalization of our HR processes:
It is reliable, flexible, and uncomplicated."*

Helgar Thomic-Sutterlüti, MMag., MR
Head of Group I/A - Personnel, Organization, Budget, Training
Austrian Federal Ministry of the Interior

LeanMIS proves its worth in the security-oriented IT environment of the ministry: Sensitive data must not leave the premises, so a public cloud is out of the question. A private cloud is expensive. LeanMIS does not require a cloud.

The ministry's large IT systems, such as SAP, cannot fully cover specific requirements. LeanMIS docks onto the large systems and flexibly delivers the missing "last mile", such as drag & drop HR planning.

Professional users prefer Microsoft Excel in the office, it makes them productive. LeanMIS delivers data directly to Excel.

With LeanMIS, the ministry is tapping into the following advantages:

- Digitization - immediate and sustainable. On the basis of already paid for, tried and tested software that everyone is familiar with: Microsoft Office.
- LeanMIS eliminates personnel dependencies ("Colleague XYZ always does these complex SAP evaluations. But she's on vacation now").
- BMI can maintain the software itself and is not reliant on external parties.
- LeanMIS creates complex, interactive office applications exactly according to the wishes of the ministry.

Existing, tried and tested Excel files can be reused, saving substantial time, costs and nerves.

Key figures

Improvements

Organizational planning via drag & drop

Quality control of the database

Flexible, powerful evaluations in Excel

Planning works both centrally, based on a database, and offline. The latter is important for confidential planning variants.

About LeanMIS

LeanMIS is an Excel-based BI solution for large organizations. LeanMIS aggregates data from many data sources (SQL, ERP, CRM, files, cloud) with as little redundancy as possible, manages reports and ensures their accuracy. Users can create individual reports ad hoc with Excel. LeanMIS is also an Austrian software company based in Vienna.

LeanMIS Reference

Planning the organization of the ministry is done by drag and drop either strategically top-down...

...or detailed bottom-up:

Results are stored in the database.

LeanMIS outputs results in Microsoft Excel. Not just as a download, but as a highly formatted, interactive Office application embedded in workflows.
